It may also be used as a prophylactic in many other cases of injury to the brain or spinal cord, oedema caused by trauma, haemorrhage and encephalomyelitis, or in conjunction with (coronary bypass) surgery. Treatment (which may be prophylactic) is used where ischaemic/epoxic conditions may cause cerebral hypoxia, or progressive loss of neurons due to oxygen depletion, including in patients with hypotension. The treatment reduces CIV by at least 25, particularly at least 70,%. The present sequence represents a hedgehog sequence given in the present
                                                                                                                                                                                                                                                                                                                                                                                                                                   Mouse Sonic hedgehog (Shh) protein.
Sonic hedgehog; Shh protein; mouse; dopaminergic; GABA-nergic;
ptc therapeutic; patched; signal transduction; Parkinson's dis
Huntington's disease; amyotrophic lateral sclerosis;
Increasing the survival of neuronal, dopaminergic and GABA cells - by using a ptc therapeutic such as a protein kinas inhibitor, or an agent derived from hedgehog polypeptides,
                                                                                                                                                                                                                                        04-FEB-1999.

Disclosure; Page 89-91; 138pp; English.
This polypeptide is mouse Shh Sonic hedgehog protein. The
invention is based on the finding that hedgehog proteins are useful
as protective agents in the treatment and prophylaxis of
neurodegenerative disorders resulting from the loss of dopaminergic
and/or GABA-nergic neurons, or the general loss of tissue from the
substantia nigra. Exemplary disorders include Parkinson's disease,
Huntington's disease (both claimed), amyotrophic lateral sclerosis
and cerebral ischaemia. The invention relates to hedgehog
therapeutics (i.e. hedgehog polypeptides and gene therapy constructs
e.g. constructs encoding recombinant hedgehog gene regulatory
ctrans-activation constructs for altering hedgehog gene regulatory
sequences) and ptc therapeutics (i.e. agents which mimic the effect
of naturally occurring hedgehog proteins on patched signalling)
that are effective in both human and animal subjects. Human Ihh
and Dhh polypeptides (see w97763-64) are preferred. The products
can also be used for the maintenance of differentiated neurons in
cultures, and to enhance the implantation of such neuronal cells in
an animal. They can be used to prevent or treat neurodegenerative
conditions arising from the use of certain drugs, and ip the

PS Disclosure; Page 115-116; 130pp; English.
CC The present sequence is mouse Sonic hedgehog protein Shh. The
CC invention relates to a method for modulating the formation and/or
CC maintenance of muscle tissue by ecotopically contacting muscle
CC cells, especially muscle stemp/progenitor cells, in vitro or in
CC vivo, with a hedgehog therapeutic (i.e. hedgehog polypeptides and
CC gene therapy constructs) or ptc therapeutic (i.e. a small organic
CC molecule that mimics the effect of hedgehog proteins on patched
CC signalling, or activates or potentiates patched signalling) in an
CC amount effective to alter the growth state of the treated cells.
CC also claimed is a method for treatment or prevention of disorders
CC of, or surgical or cosmetic repair of, such muscle tissues, by
CC administering a hedgehog polypeptide or ptc therapeutic. The
CC disorder may be muscle atrophy, in particular skeletal muscle
CC atrophy or cardiac muscle atrophy, cachexia, or muscular myopathy
CC (all claimed). The hedgehog polypeptide or ptc therapeutic can
CC inhibit growth of myoblastic derived tissue to provide treatment of
CC myoblastic sarcoma (also claimed). The hedgehog therapeutic
CC myoblastic sarcoma (also claimed). The hedgehog therapeutic
CC preferably comprises at least a bioactive extracellular portion of
CC genence (see x2598-107), especially a human hedgehog gene.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             PT gland gene(s)

PS Claim 13: Pages 150-151; 210pp; English

CC This represents a zebrafish sonic hedgehog (shh) protein sequence. The

CC differention provides methods and compounds for modulating proliferation or

CC differentiation of neuronal cells, cholesterol biosynthesis or transport

CC or expression of pituitary gland genes. The method for affecting

CC cholesterol biosynthesis or transport in a cell comprises contacting a

CC cell with a compound that affects hedgehog, thereby affecting cholesterol

CC biosynthesis or transport. The methods for inhibiting the neural inducing

CC cellyty of a hedgehog polypeptide in cells, and for inducing pituitary

CC gland gene expression utilises sequences selected from a zebrafish

CC tiggy-winkle hedgehog (twhh) protein (W61487) or a mouse shh

CC (shh) protein (W61486), a chicken shh protein (W61487) or a mouse shh

CC can affect hedgehog activity. They can be used for treating disorders

CC which arise from neuronal degeneration or abnormal function. They can

CC also be used as nerve-sparing agents or in restoring or promoting

CC appropriate patterning during the healing of major limb trauma. They can

CC also be used for treating Smith-Lemli-Optiz syndrome. The products can

CC convence A 18 a.

Claim 17; Page 143-45; 210pp; English.

The sequence represents a human sonic hedgehog protein, homologous to a Drosophila hedgehog protein (R77337), and is encoded by a cDN/ isolated from a human fetal lung cDNA library. Probes and primers isolated from the sonic hedgehog gene may be used as diagnostic derived from the sonic hedgehog gene may be used as diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               agents for neuromuscular, autonomic or central nervous system disorders, and the gene may also be used in gene therapy. Antibodies generated from the protein may be used as therapeutic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human sonic hedgehog protein.
Human; sonic hedgehog protein; probe; primer; diagnostic;
nervous system disorder; gene therapy; antibody.
Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             R77341;

                                                                                                                                                                                                                                                               AND OSSIFICATION OF THE DEVELOPING BONES. INDUCES THE EXPRESSION OF PARAPHYROID HORMONE-RELATED PROTEIN (FPHRP).

OF PARAPHYROID HORMONE-RELATED PROTEIN EXPRESSION WITH THE CELL SURFACE. IS ALSO SECRETED IN ETHER CLEAVED OR UNCLEAVED FORM TO MEDIATE SIGNALING TO OPHER CELLS (BY SIMILARITY).

OF MEDIATE SIGNALING TO OPHER CELLS (BY SIMILARITY).

OF CARTILAGE OF DEVELOPING LONG BONES, EPITHELIUM AND UNGCENITAL SINUS. IN THE ADULT KLDNEY, FOUND IN PROXIMAL CONVOLUTED AND PROXIMAL STRAIGHT TUBULE.

OEVELOPING GUT, AT 14.5 DAYS DOC IN THE CARTILAGE PRIMORDIUM AND IN THE DEVELOPING UNCCENTRAL SINUS. EXPRESSION INCREASES WITH GESTIONAL AGE IN KIDNEY AND DUDDENUM, BECOMING MAXIMAL IN GESTIONAL AGE IN KIDNEY AND DUDDENUM, BECOMING MAXIMAL IN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      "Sonic hedgehog, a member of a family of putative signaling molecules, is implicated in the regulation of CNS polarity."; Cell 75:1417-1430(1993).

PTM: THE C-TERMINAL DOMAIN DISPLAYS AN AUTOPROTEOLYSIS ACTIVITY AND A CHOLESTEROL TRANSFERASE ACTIVITY. BOTH ACTIVITIES RESULT IN THE CLEAVAGE OF THE FULL-LENGTH PROTEIN AND COVALENT ATTACHMENT OF A CHOLESTEROL MOIETY TO THE C-TERMINAL OF THE NEWLY GENERATED N-TERMINAL FRAGMENT (N-PRODUCT). THIS COVALENT MODIFICATION APPEARS TO PLAY AN ESSENTIAL DISTRIBUTION OF THE PROTEIN ACTIVITY TO THE CELL SURFACE. THE N-PRODUCT IS THE ACTIVE SPECIES IN BOTH LOCAL AND LONG-RANGE SIGNALING, WHEREAS THE C-PRODUCT HAS NO SIGNALING ACTIVITY (BY SIMILARITY),

SIMILARITY: BELONGS TO THE HEDGEHOG FAMILY.

RI and PTH-related protein.";

RI Science 273:613-622(1996).

CC -!- FUNCTION: INTERCELLULAR SIGNAL ESSENTIAL FOR A VARIETY OF PATTERNING EYENTOMS IN ASSOCIATION WITH SMOOTHENED (SMO), TO CC RECEPTOR, WHICH FUNCTIONS IN ASSOCIATION WITH SMOOTHENED (SMO), TO CC RECEPTOR, WHICH FUNCTIONS IN ASSOCIATION WITH SMOOTHENED IN CC ACTIVATE THE TRANSCRIPTION OF TARGET GENES. IMPLICATED IN CC AND OSSIFICATION: THE DEVELOPING BONES. INDUCES THE EXPRESSION CC OF PARATHYROLD HORMONE-RELATED PROTEIN (PTHRP).

CC -!- SUBCELLULAR LOCATION: THE C-TERMINAL PEPTIDE DIFFUSES FROM THE CELL, WHILE THE N-TERMINAL PEPTIDE DIFFUSES FROM THE CELL, WHILE THE N-TERMINAL PEPTIDE DIFFUSES FROM THE CELL, SURFACE. IS ALSO SECRETED IN EITHER CLEAVED OR UNCLEAVED FORM CC TISSUE SPECIFICITY: EXPRESSED IN DEVELOPING MIDGUT, LUNG AND CC CARTILAGE OF DEVELOPING LONG BONES IN THE LIMB.

CC -!- FIM: THE C-TERMINAL DOMAIN DISPLAYS AN AUTOPROTEOLYSIS ACTIVITY OF THE CLEAVAGE OF THE FULL-LENGTH PROTEIN AND COVALENT ATTACHMENT OF A CHOLESTEROL MOIETY TO THE C-TENTINAL OF THE NEWLY GENERATED N-CC ACTIVE SPECIES IN BOTH LOCAL AND LONG-RANGE SIGNALING, WHEREAS THE CC ACTIVE SPECIES IN BOTH LOCAL AND LONG-RANGE SIGNALING, WHEREAS THE CC ACTIVE SPECIES IN BOTH LOCAL AND LONG-RANGE SIGNALING, WHEREAS THE CC SIMILARITY: BELONGS TO THE HEDGEHOG FAMILY.

CC -!- SIMILARITY: BELONGS TO THE HEDGEHOG FAMILY.

-!- SUBCELLULAR LOCATION: THE C-TERMINAL PEPTIDE DIFFUSES FROM THE CELL, WHILE THE N-TERMINAL PEPTIDE REMAINS ASSOCIATED WITH THE CELL SURFACE. IS ALSO SECRETED IN EITHER CLEAVED OR UNCLEAVED FORM TO MEDIATE SIGNALING TO OTHER CELLS (BY SIMILARITY).

-!- TISSUE SPECIFICITY: EXPRESSED IN A NUMBER OF EMBRYONIC TISSUES INCLUDING THE NOTOCHORD, VENTRAL NEURAL TUBE, FLOOR PLATE, LUNG BUD, ZONE OF POLARIZING ACTIVITY AND POSTERIOR DISTAL MESENCHYME OF LIMBS. IN THE ADULT, EXPRESSED IN LUNG AND NEURAL RETINA.
-!- DEVELOPMENTAL STAGE: FIRST DETECTABLE DURING GASTRULATION.
-!- INDUCTION: BY RETINOID ACID:
-!- INDUCTION: BY RETINOID ACID:
-!- PTM: THE C-TERMINAL DOMAIN DISPLAYS AN AUTOPROTEOLYSIS ACTIVITY AND A CHOLESTEROL TRANSFERASE ACITVITY. BOTH ACTIVITIES RESULT IN THE CLEAVAGE OF THE FULL-LENGTH PROTEIN AND COVALENT ATTACHMENT OF A CHOLESTEROL MOIETY TO THE C-TERMINAL OF THE NEWLY GENERATED N-TERMINAL PRAGMENT (N-PRODUCT). THIS COVALENT MODIFICATION APPEARS TO PLAY AN ESSENTIAL ROLE IN RESTRICTING THE SPATIAL DISTRIBUTION OF THE PROTEIN ACTIVITY TO THE CELL SURFACE. THE N-PRODUCT IS THE ACTIVITY SOURCE AS NO SCIENTAL MORE SIGNALING, WHEREAS THE G-ENDICE AND LOCAL AND LONG-RANGE SIGNALING, WHEREAS THE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Roelink H., Porter J.A., Chiang C., Tanabe Y., Chang D.T., Beachy P.A., Jessell T.M.;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    FUNCTION: BINDS TO THE PATCHED (PTC) RECEPTOR, WHICH FUNCTIONS IN ASSOCIATION WITH SMOOTHENED (SMO), TO ACTIVATE THE TRANSCRIPTION OF TARGET GENES. AN THE ABSENCE OF SHH, PTC REPRESSES THE CONSTITUTIVE SIGNALING ACTIVITY OF SMO. ALSO REGULATES ANOTHER TARGET, THE GLI ONCOGENE. INTERCELLULAR SIGNAL ESSENTIAL FOR A VARIETY OF PATTERNING EVENTS DURING DEVELOPMENT: SIGNAL PRODUCED BY THE NOTOCHORD THAT INDUCES VENTRAL CELL FATE IN THE NUBRAL TUBE AND SOMITES, AND THE POLARIZING SIGNAL FOR PATTERNING OF THE ANTERIOR-POSTERIOR AXIS OF THE DEVELOPING LIMB BUD. DISPLAYS BOTH FLOOR PLATE-AND MOTOR NUBRON-INDUCING ACTIVITY. THE THRESHOLD CONCENTRATION OF N-PRODUCT REQUIRED FOR MOTOR NEURON INDUCTION IS 5-FOLD LOWER THAN THAT REQUIRED FOR FLOOR PLATE INDUCTION (BY
C-PRODUCT HAS NO SIGNALING ACTIVITY.
SIMILARITY: BELONGS TO THE HEDGEHOG FAMILY.

-I- SUBCELLULAR LOCATION: THE C-TERMINAL PEPTIDE DIFFUSES FROM THE CELL, WHILE THE W-TERMINAL PEPTIDE REMAINS ASSOCIATED WITH THE CELL SUBVACE. IS ALSO SECRETED IN EITHER CLEAVED OR UNCLEAVED FORM TO MEDIATE SIGNALING TO OTHER CELLS (BY SIMILARITY).

-I- TISSUE SPECIFICITY: EXPRESSED IN THE VENTRAL MIDLINE OF THE NEURAL TUBE AND BRAIN, ALSO FOUND IN THE OFTOCHORD AND IN DEVELOPING FIN BUD. IN THE DEVELOPING BRAIN, EXPRESSION OCCURS IN DEWELOPING FIN INCLUDE A DISCRETE REGION IN THE FLOOR OF THE DIENCEPHALON.

-I- DEVELOPMENTAL STAGES FIRST DETECTABLE IN THE INNER CELL LAYER OF THE EMBRYONIC SHIELD DURING GASTROLATION. BY 9.5 HRS OF THE DIENCEPHALON.

DEVELOPMENTAL STAGES FIRST DETECTABLE IN THE INNER CELL LAYER OF THE EMBRYONIC SHIELD DURING GASTROLATION. BY 9.5 HRS OF THE DIENCEPHALON. THE PRESUMPTIVE MIDBRAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  closely related to the zebratish.;

Proc. Natl. Acad. Sci. U.S.A. 93:13036-13041(1996).

-: FUNCTION: INTERCELLULAR SIGNAL ESSENTIAL FOR A VARIETY OF ATTERNING EVENTS DURING DEVELOPMENT. SIGNAL PRODUCED BY THE NOTOCHORD THAT INDUCES SOMITE PATTERNING, DORSO-VENTRAL PATTERNING OF THE BRAIN AND EARLY PATTERNING OF THE DEVELOPING EYES. DISPLAYS FLOOR PLATE-INDUCING ACTIVITY. BINDS TO THE PATCHED (PTC) RECEPTOR, WHICH FUNCTIONS IN ASSOCIATION WITH SMOOTHENED (SMO), TO ACTIVATE THE TRANSCRIPTION OF TARGET GENES. IN THE ABSENCE OF SHI, PTC REPRESSES THE CONSTITUTIVE SIGNALING ACTIVITY OF SMO (BY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ekker S.C., Ungar A.R., Greenstein P

PIM: THE C-TERMINAL DOMAIN DISPLAYS AN AUTOPROTEOLYSIS ACTIVITY AND A CHOLESTEROL TRANSFERASE ACTIVITY. BOTH ACTIVITIES RESULT IN THE CLEAVAGE OF THE FULL-LENGTH PROTEIN AND COVALENT ATTACHMENT OF A CHOLESTEROL MOIETY TO THE C-TERMINAL OF THE NEWLY GENERATED N-TERMINAL FRAGMENT (N-PRODUCT). THIS COVALENT MODIFICATION APPEARS TO PLAY AN ESSENTIAL ROLE IN RESTRICTING THE SPATIAL DISTRIBUTION OF THE PROTEIN ACTIVITY TO THE CELL SCREACE. THE N-PRODUCT IS THE ACTIVE SPECIES IN BOTH LOCAL AND LONG-RANGE SIGNALING, WHEREAS THE C-PRODUCT HAS NO SIGNALING ACTIVITY (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SIMILARITY)

"Mutations in the human Sonic Hedgehog gene cause holoprosencephaly.";

RL Nat. Genet. 14:357-350(1996).

C elenet. 14:357-350(1996).

C -1- FUNCTION: BINDS TO THE PATCHED (PTC) RECEPTOR, WHICH FUNCTIONS IN ASSOCIATION WITH SMOOTHENED (SMO). TO ACTIVATE THE TRANSCRIPTION OF TARGET GENES. IN THE ABSENCE OF SHH, PTC REPRESSES THE CONSTITUTIVE SIGNALING ACTIVITY OF SMO. ALSO REGULATES ANOTHER CONSTITUTIVE SIGNALING ACTIVITY OF SMO. ALSO REGULATES ANOTHER ACTIVITY OF PATTERNING EVENTS DURING DEVELOPMENT: SIGNAL FOR A CONSTITUTIVE SIGNAL INDUCES DURING DEVELOPMENT: SIGNAL FOR A CONSTITUTIVE SIGNAL FROM THE NEURAL TUBE BY THE MOTOCHORD THAT INDUCES VENTRAL CELL FATE IN THE MEURAL TUBE AND SOMITES, AND THE POLARIZING SIGNAL FOR PATTERNING OF THE FLOOR PLATE-AND MOTOR NEURON INDUCTION IS CONCENTRATION OF N-PRODUCT REQUIRED FOR MOTOR NEURON INDUCTION IS CONCENTRATION OF N-PRODUCT REQUIRED FOR FLOOR PLATE INDUCTION (BY STATE DEVELOPING LIMB BUD. DISPLAYS BOTH FLOOR PLATE THAN THAT REQUIRED FOR FLOOR PLATE INDUCTION (BY STATE DEVELOPING LIMB BUD. SIGNAL FRESHOLD CONCENTRATION OF N-PRODUCT REQUIRED FOR MOTOR NEURON INDUCTION (BY STATE DEVELOPING LIMB BUD. DISPLAYS BOTH FLOOR PLATE INDUCTION (BY STATE DEVELOPING LIMB BUD. DISPLAYS BOTH FLOOR PLATE INDUCTION (BY STATE DEVELOPING LIMB BUD. SIGNAL FRESHOLD SIGNAL FROM INDUCTION (BY STATE DEVELOPING LIMB BUD. SIGNAL FROM INDUCTION
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 -!- PTM: THE C-TERMINAL DOMAIN DISPLAYS AN AUTOPROTEOLYSIS ACTIVITY AND A CHOLESTEROL TRANSFERASE ACTIVITY. BOTH ACTIVITIES RESULT IN THE CLEAVAGE OF THE FULL-LENGTH PROTEIN AND COVALENT ATTACHMENT OF A CHOLESTEROL MOIETY TO THE C-TERMINAL OF THE NEMLY GENERATED N-TERMINAL FRAGMENT (N-PRODUCT). THIS COVALENT MODIFICATION APPEARS TO PLAY AN ESSENTIAL ROLE IN RESTRICTING THE SPATIAL DISTRIBUTION OF THE PROTEIN ACTIVITY TO THE CELL SURFACE. THE N-PRODUCT IS THE ACTIVE SPECIES IN BOTH LOCAL AND LONG-RANGE SIGNALING, WHEREAS THE C-PRODUCT HAS NO SIGNALING ACTIVITY (BY SIMILARITY).

1- DISCASE: DEFECTS IN SHH ARE THE CAUSE OF THE AUTOSOMAL DOMINANT DISCASE: DEFECTS IN SHH ARE THE CAUSE OF THE AUTOSOMAL DOMINANT DISCASE: DEFECTS IN SHH ARE THE CAUSE OF THE AUTOSOMAL DOMINANT DISCASE: DISCASE THAT AFFECTS THE MIDLINE DEVELOPMENT OF THE FOREBRAIN AND MIDFACE. HPE IS ASSOCIATED WITH SEVERAL DISTINCT FACIES AND PHENOTYPIC VARIABILITY. IN THE MOST EXTREME CASES, ANOPHTALMIA OR CYCLOPIA IS EVIDENT ALONG WITH A CONGENITAL DISSENCE OF THE MATURE NOSE. THE LESS SEVERE FORM FEATURES FACIAL DISSOCIATED BY OCCULAR HYPERTELORISM, DEFECTS OF THE DISSOCRAFTS TO THE SECOND OF THE MIDLING CHARACTERIZED BY OCCULAR HYPERTELORISM, DEFECTS OF THE

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SIMILARITY).

SUBCELLULAR LOCATION: THE C-TERMINAL PEPTIDE DIFFUSES FROM THE SUBCELLULAR LOCATION: THE C-TERMINAL PEPTIDE REMAINS ASSOCIATED WITH THE CELL, WHILE THE N-TERMINAL PEPTIDE REMAINS ASSOCIATED WITH THE CELL SURFACE. IS ALSO SECRETED IN EITHER CLEAVED OR UNCLEAVED FORM TO MEDIATE SIGNALING TO OTHER CELLS (BY SIMLIARITY).

TISSUE SPECIFICITY: EXPRESSED IN FETAL INTESTINE, LIVER, LUNG, AND KIDNEY. NOT EXPRESSED IN ADULT TISSUES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                UPPER LIP AND/OR NOSE, AND ABSENCE OF THE OLFACTORY NERVES OR

CELL, WHILE THE N-TERMINAL PEPTIDE DIFFUSES FROM THE CELL, WHILE THE N-TERMINAL PEPTIDE DIFFUSES FROM THE CELL, WHILE THE N-TERMINAL PEPTIDE REMAINS ASSOCIATED WITH THE CELL, SURFACE. IS ALSO SECRETED IN EITHER CLEAVED OR UNCLEAVED FORM TO MEDIATE SIGNALING TO OTHER CELLS (BY SIMILARITY).

TO MEDIATE SIGNALING TO OTHER CELLS (BY SIMILARITY).

INDUCTION: ACTIVATED BY ACTIVIN, BASIC FIBROBLAST GROWTH FACTOR (BFGF) AND PORK HEAD.

(BFGF) AND PORK HEAD.

-1- PTM: THE C-TERMINAL DOMAIN DISPLAYS AN AUTOPROTEDLYSIS ACTIVITY AND A CHOLESTEROL TRANSFERASE ACTIVITY. BOTH ACTIVITIES RESULT IN THE CLEAVAGE OF THE FULL-LENGTH PROTEIN AND COVALENT ATTACHMENT OF A CHOLESTEROL MOIETY TO THE C-TERMINAL OF THE NEWLY GENERATED N-TERMINAL FRAGMENT (N-PRODUCT). THIS COVALENT MODIFICATION APPEARS TO PLAY AN ESSENTIAL ROLE IN RESTRICTING THE SPATIAL DISTRIBUTION OF THE PROTEIN ACTIVITY TO THE CELL SURFACE. THE N-PRODUCT IS THE ACTIVE SPECIES IN BOTH LOCAL AND LONG-RANGE SIGNALING, WHEREAS THE C-PRODUCT HAS NO SIGNALING ACTIVITY (BY SIMILARITY).

SIMILARITY: BELONGS TO THE HEDGEHOG FAMILY.
                                                                                                                                                                                                                                                                                                     BINDING

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           EDLINE; 95357169
SUBCELLULAR LOCATION: THE C-TERMINAL PEPTIDE DIFFUSES FROM THE CELL, WHILE THE W-TERMINAL PEPTIDE REMAINS ASSOCIATED WITH THE CELL SURFACE. IS ALSO SECRETED IN EITHER CLEAVED OR UNCLEAVED FOR MEDIATE SIGNALING TO OTHER CELLS (BY SIMILARITY).

TISSUE SPECIFICITY: STONGLY EXPRESSED IN NOTOCHORD AND NEURAL FLOOR PLATE DURING EMBRYOGENESIS. IN TADPOLE, HIGH EXPRESSION I OBSERVED IN PANCREAS/STOMACH, MODERATE EXPRESSION IN TAIL, AND EXPRESSION IN INTESTINE, BRAIN, AND HIND LIMB.

DEVELOPMENTAL STAGE: FIRST DETECTED AT THE NEURULA (STAGES 16-1
                                                                                                                                                                                                                                                                            SIMILARITY)

BOTH ACTIVITIES RESULT IN THE CLEAVAGE OF THE FULL-LENGTH PROTEIN AND COVALENT ATTACHMENT OF A CHOLESTEROL MOZETY TO THE C-TERMINAL OF THE NEWLY GENERATED N-TERMINAL FRAGMENT (N-PRODUCT). THIS COVALENT MODIFICATION APPEARS TO PLAY AN ESSENTIAL ROLE IN RESTRICTING THE SPATIAL DISTRIBUTION OF THE PROTEIN ACTIVITY TO THE CELL SHEELS. THE N-PRODUCT IS THE ACTIVE SPECIES IN BOTH LOCAL AND LONG-RANGE SIGNALING, WHEREAS THE C-PRODUCT HAS NO SIGNALING ACTIVITY (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        INDUCTION: BY THYROID HORMONE.
